ABSTRACT OF THE DISCLOSURE

A method for updating software in a radio
terminal device of a mobile communication system,
wherein a base station and radio terminal devices

5   are connected mutually through radio communication
channels, including the steps of notifying version
information on a control-software of the radio
terminal device to a software-supply device
connected to a network by the radio terminal device,

10 determining a necessity of updating the control-
software by comparing the version information
received from the radio terminal device with latest
version information stored in and managed by the
software-supply device, and downloading new control-

15 software that is appropriate to update the version
of the control-software to the radio terminal device
by the software-supply device if updating of the
control-software is needed.
